

GLOBAL AMBITIONS, SOLID MEASURES

The United Nations Sustainable Development Goals and Magneti Marelli's contribution to reaching them.

SUSTAINABLE DEVELOPMENT GOALS

The 17 Sustainable Development Goals (SDGs) are the objectives contained in the 2030 Agenda for Sustainable Development, and represent the United Nation's global plan of action for the undermining of poverty, the protection of the planet and the guaranteeing of prosperity for all. Never before has such a wide-ranging level of agreement been reached on a global level with regards to environmental, social and economic sustainability. Laid out via 169 specific objectives, the SDGs officially came into force on 1 January 2016.

The Sustainable Development Goals set out by the United Nations serve as a call for action addressed to all entities which can make a contribution to their accomplishment, beginning with governments, businesses, civil society organisations, right down to individual citizens. Magneti Marelli has identified six themes on which its activities have significant impact on sustainability, and it undertakes to act in a concrete manner in regard to these.

Specifically, the six themes on which Magneti Marelli can have an impact are:

- 8.** Ensure the highest standards of health and safety and protection of human rights in all of its manufacturing sites.
- 9.** Valorise its own capacities for innovation not only for efficiency

and profitability, but also to improve the quality of life for the citizens and communities.

11. Work towards a form of mobility which renders cities safer and better to live in, and contribute to the economic and social development of all of the countries in which it operates.

12. Render its manufacturing processes ever more efficient and environmentally compatible, and supply products which render vehicles less polluting and safer.

13. Promote the reduction of both direct and indirect climate-altering gas emissions.

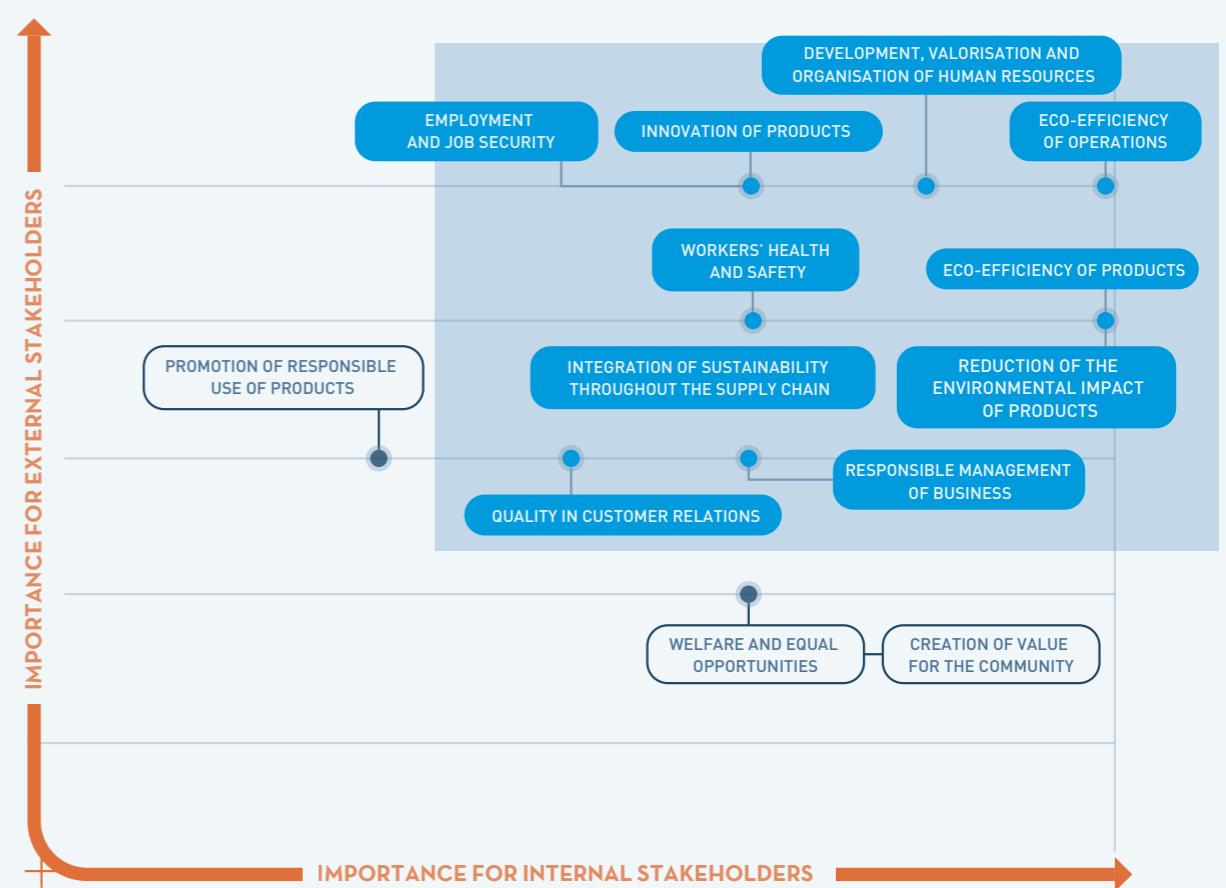

17. Share - with governments, private sectors and society - visions, principles, values and objectives that place people and the planet at the centre of attention.

The implementation of the SDGs in business activity is a long and articulated process. How can the global ambitions be translated into concrete measures? How can we identify the themes on which to concentrate? An attempt to answer these questions is made by the analysis of materiality, a series of assessments which the Company began to carry out last year and which allows for the selection of the aspects of the life of a company which are truly important, in order to render it more sustainable. This is a process which Magneti Marelli has again defined this year, also taking into account the point of view of the stakeholders.

The themes in which Magneti Marelli is particularly active can be grouped into three main areas:

- products, which must be designed, created and used in an ever more environmentally and socially responsible manner;
- company governance, in order to ensure that business is carried out according to rules of legality and correctness, with respect for the declared principles and values;
- research and innovation, in order to ensure that the patrimony of knowledge and instruments that the Company can put into action are oriented towards bringing all-round improvements to society.

The materiality matrix

The matrix shows the important themes which have a relevant impact on the Company's activity. The highlighted area contained the so-called "material" aspects, or rather the most important, on which the commitments and the work of the Company is focused.
